Show results after measurement.

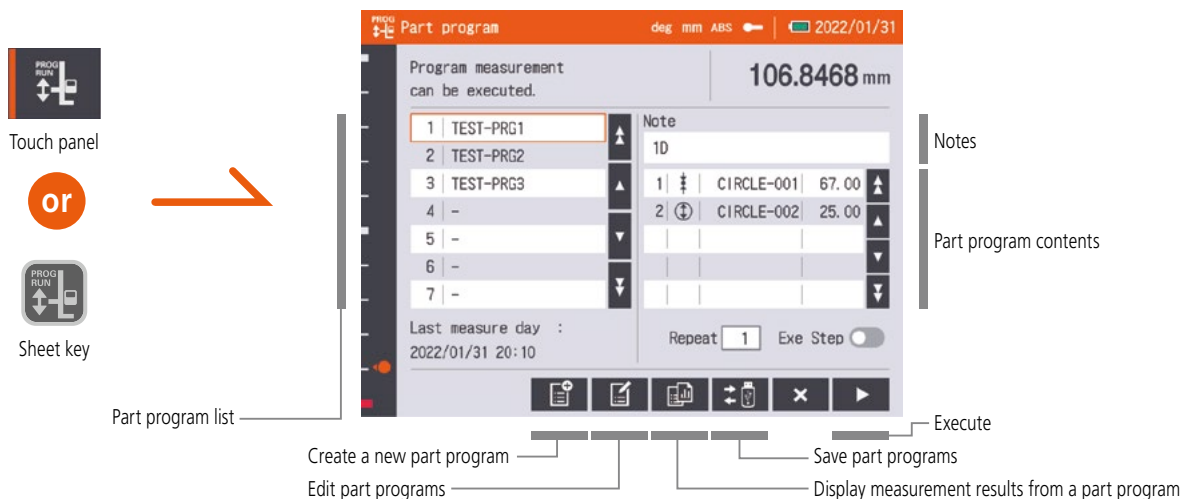

You can monitor the graphs of past measurement results.

Show measurement results in graph form.

Part program measurement

You can easily access and use the functions of Create, Run, Edit, and View results of part programs.

Example of performing part program measurement

Run the program repeatedly (when the number of executions is $\neq 1$)

Set the number of times to repeat measurements and run the program.

Run the registered contents one by one.

Display the result for one execution of the program.

Display all results for one execution of the program.

Display all results of N times of executing the program.

Copy part programs to other devices

By using a USB memory device, you can copy part programs to other devices.

Expanded measurement area

With the new optional probes, you can now measure areas that were beyond the capacity of conventional probes.

Versatile measurements through optional probes

An extension holder and a depth stylus extend the measuring range both horizontally and vertically

Three types of optional probes:

- ① The holder and the stylus can be freely combined according to the purpose of measurement, and the measurement area can be changed.
- ② This type is used for single-use measurements such as measuring a tapered hole or a knife edge.
- ③ This type is used to measure straightness and perpendicularity.
- ☆ You can adjust the balance of the slider by adjusting the number of auxiliary weights. (Magnetic auxiliary weights are easy to add and remove.)
